FOOLAD369CO.

About the company and the vision of the Steel Company

This company has been active in the field of supplying all steel sections at the national and international levels without volume restrictions since 1401 (Solar Hijri Calendar). In the past years, this organization, under the name "Miri nejad Commercial", has been operating for 50 years. With the new policies of the group towards harmonizing with new markets and innovative approaches to global markets, 369 Steel Group has defined new missions for its employees by changing its form and nature.

The International Steel Trading Company, known as Foulad 369, focuses on supplying goods to road and building construction companies and industrial producers in all areas, providing the required steel sections for industries.

By considering appropriate scheduling for purchase, safe delivery, and shipping, and providing certification of weight and pricing, this group aims to offer more extensive services to steel product consumers by increasing its supply share in the future market based on the credibility and trust of its customers.

Looking at global markets and international buyers is another approach in the company.

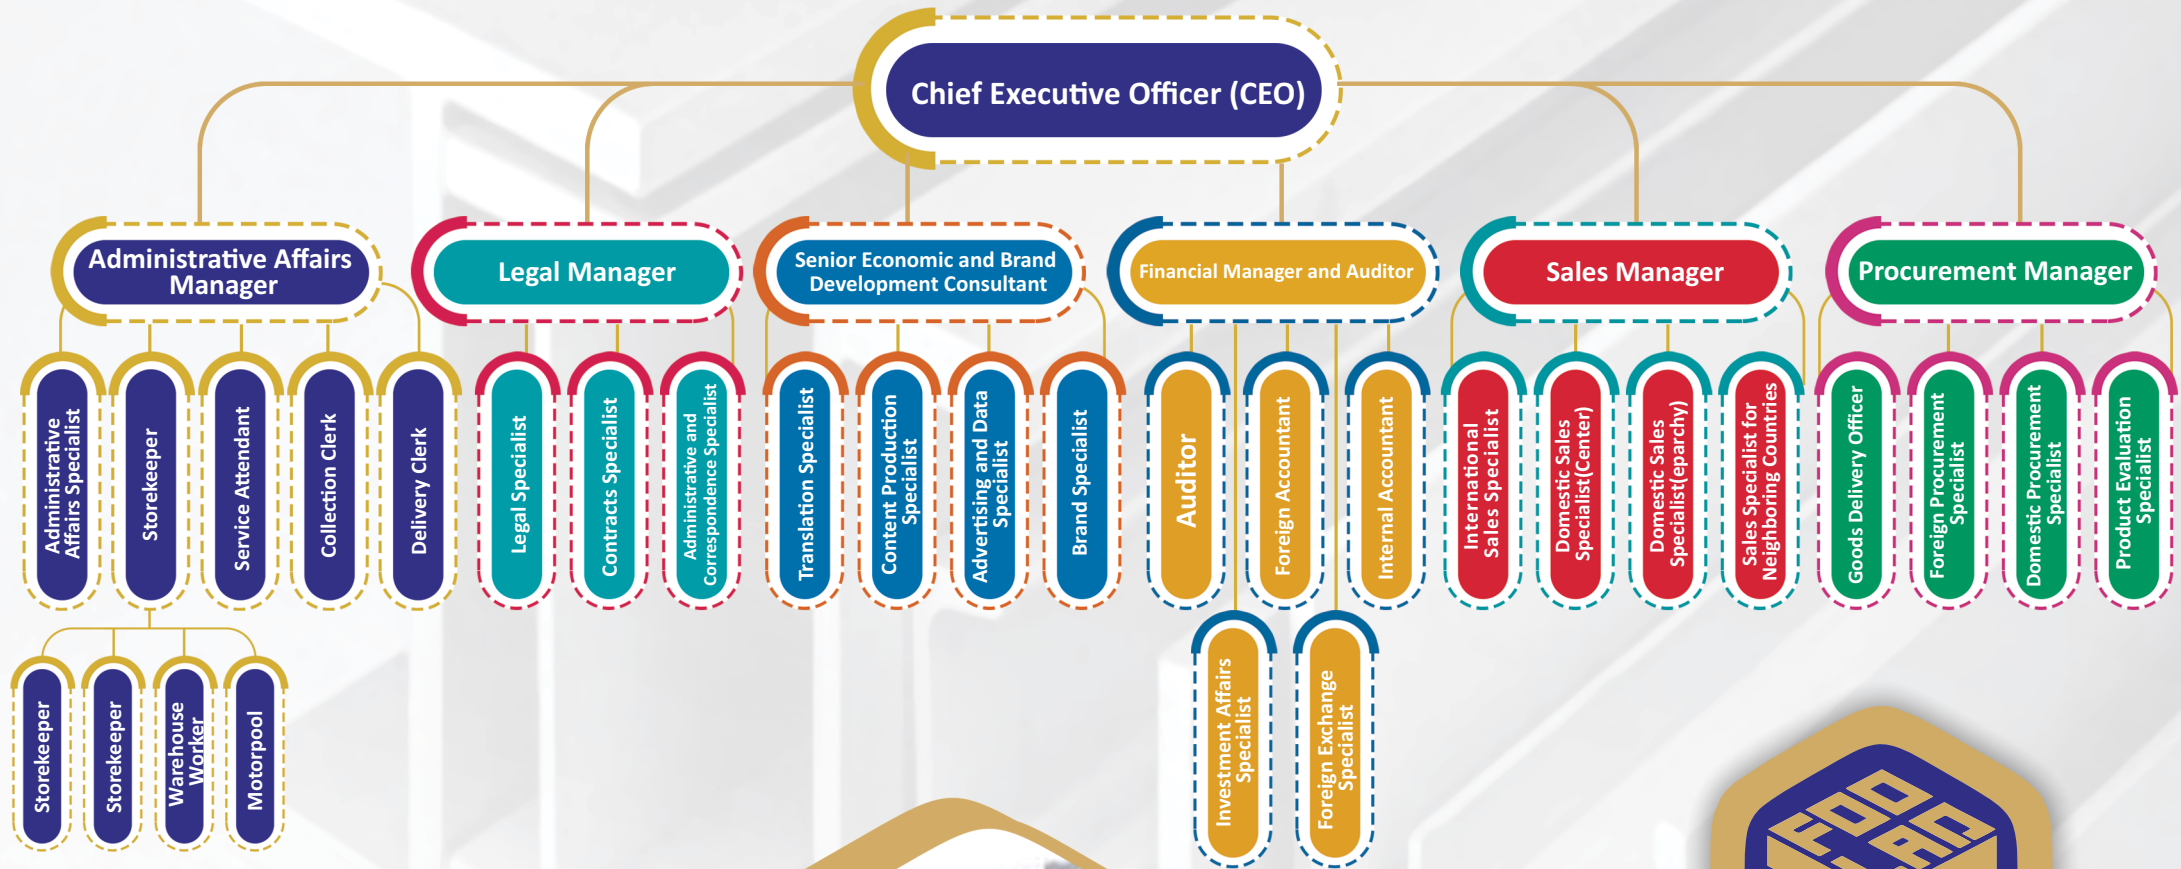

This group has initiated negotiations with medium-level buyers in the international economic system through its specialized advisory team in international markets and investments, resulting in positive outcomes. This step allows the company to assess its supply credibility in regional and trans-regional markets initially and then move towards upgrading from national standards to international standards.
